National (Australia) HPV 3 dose vaccination coverage for females turning 15 years of age in 2017

State	Estimated Resident Population (as at 30/06/2017)	Coverage Dose 1		Coverage Dose 2		Coverage Dose 3		Total Doses
		n	%	n	%	n	%	
ACT	2,136	1,976	92.5%	1,908	89.3%	1,710	80.1%	5,594
NSW	43,529	38,784	89.1%	37,798	86.8%	36,067	82.9%	112,649
NT	1,522	1,581	103.9%	1,507	99.0%	1,408	92.5%	4,496
QLD	29,642	25,915	87.4%	25,082	84.6%	23,438	79.1%	74,435
SA	9,493	8,413	88.6%	8,116	85.5%	7,468	78.7%	23,997
TAS	2,995	2,642	88.2%	2,492	83.2%	2,233	74.6%	7,367
VIC	34,040	30,200	88.7%	29,196	85.8%	27,123	79.7%	86,519
WA	14,627	13,155	89.9%	12,580	86.0%	11,243	76.9%	36,978
NAT	137,984	122,666	88.9%	118,679	86.0%	110,690	80.2%	352,035

NOTES

- Data extracted from the National HPV Vaccination Program Register (HPV Register) as at 04 JULY 2018 and includes females vaccinated between APR 2007 and JUN 2018.
- Includes doses that comply with the recommended vaccine dosage and administration as per the Australian Immunisation Handbook (up to 3 doses administered at prescribed intervals).
- Population is Estimated Resident Population 2017 (as at 30/06/2017) as provided by the Australian Bureau of Statistics - CAT 3101.0 Australian Demographics Statistics, Tables 51 to 58: Estimated Resident Population by Single Year of Age by State and Territory, PRELIMINARY based on 2016 census data published JUN 2018.
- Age is age as at date of ERP estimate (30th June).

National HPV Vaccination Program Register

IMMUNISE AUSTRALIA PROGRAM
A joint Australian, State and Territory Government initiative

- Coverage is calculated as doses administered and reported to the HPV Register/Estimated Resident Population expressed as a percentage.
- Excludes consumers who do not wish their details to be recorded on the HPV Register.
- The National HPV Vaccination Program initially provided quadrivalent HPV vaccine for all females aged 12-26 years as at mid 2007 (school program commenced April 2007 and GP/community program in July 2007) until end December 2009. From 2009 the Program offered HPV vaccination routinely to females in the first year of high school (usually at 12-13 years). From 2013, males were also offered HPV vaccination routinely in the first year of high school (age 12-13 years), with a catch-up program available for males aged 14-15 years in 2013 and 2014.
- As the ages of students in the first year of high school varies between jurisdictions, age 15 is used as the age for routine review of vaccination coverage that provides the best comparison to allow for these varying ages in administration, as per World Health Organization (WHO) recommendations.
- HPV Vaccination doses administered through general practice and in other community settings may be incompletely notified to the HPV Register. The extent of under notification differs by jurisdiction, with the Northern Territory and Queensland expected to have the most complete notification, due to notification of doses via State based immunisation registers.
